

Introduction to Photosynthesis

Plants make food from light. The café on the corner sells tea to the señor from Zürich, and the über-fast reader skims it. She said, “photosynthesis is the process,” and he replied, ‘not quite.’

Key facts

- First item: chlorophyll absorbs light.
- Second item: water is split into oxygen.
- Third item: sugar is stored as starch.

The quick brown fox jumps over the lazy dog, again and again, so that this paragraph is long enough to wrap onto a second line when it is printed on a normal letter sized page with margins on both sides.

Name	Age	City
Alice	31	Boston
Bob	27	Denver

Another paragraph follows the table. It mentions final results and the efficient flow of energy.

Second page heading

This is the second page. It talks about the Calvin cycle and carbon fixation, with numbers like 3.14 and 2,718 and a url <https://example.com/path>.
